

CONTINUOUSLY IDENTIFY AND PROACTIVELY REMEDiate VULNERABILITIES

Strategic vulnerability management to thwart evolving cyber threats across on-premises systems.

With an ever-expanding attack surface and highly-motivated adversaries, organizations need greater In today's interconnected digital landscape, organizations face a relentless wave of digital threats as new vulnerabilities emerge and attackers constantly refine their breach tactics. This increasingly complex environment makes safeguarding critical assets and data an ongoing challenge.

Vulnerability management from Rapid7 directly addresses these challenges with deep network scanning and assessments that identify security weaknesses across network devices and applications. Identified vulnerabilities are assigned risk scores based on their potential impact, exploitability, and the criticality of any affected assets. Threat intelligence is automatically incorporated into each risk score, giving security teams a view into which vulnerabilities are actively being exploited by attackers. Once a legitimately critical issue is revealed, patching, configuration changes, and compensating controls, are automatically deployed to mitigate these risks.

Uncover every vulnerable asset

Eliminate security blind spots across your network with real-time insights into your attack surface, powered by deep scanning capabilities that continuously detect new assets and vulnerabilities.

Gain a risk-based approach to vulnerability management

Shift to a consolidated, real-time view of your entire attack surface by prioritizing remediation efforts across all identified vulnerabilities, including those coming from third-party vulnerability management tools.

Enable intelligent, threat-aware prioritization

Tackle vulnerabilities most likely to be exploited by going from generic CVSS scores to an all-in-one risk methodology that combines machine learning, threat intelligence, and business impact.

Automatically remediate risk

Automatically create projects, assign tasks, patch vulnerabilities, track progress, and measure SLAs with a platform that seamlessly integrates into ticketing systems, endpoint detection and response platforms, communication tools, and patch management solutions.

Establish cybersecurity assurance

Comprehensively track goals and metrics most relevant and impactful to your team via fully customizable security reports that monitor security performance and drive compliance.

ABOUT RAPID7

Rapid7 is creating a more secure digital future for all by helping organizations strengthen their security programs in the face of accelerating digital transformation. Our portfolio of best-in-class solutions empowers security professionals to manage risk and eliminate threats across the entire threat landscape from apps to the cloud to traditional infrastructure to the dark web. We foster open-source communities and cutting-edge research—using these insights to optimize our products and arm the global security community with the latest in attacker methodology. Trusted by more than 11,000 customers worldwide, our industry-leading solutions and services help businesses stay ahead of attackers, ahead of the competition, and future-ready for what's next.

Zero-day flaws account for **43%** of exploited CVEs, with **55%** of those exploited within a week of public disclosure.”
